

DULATHMI SADESNA

Full Stack Developer Intern

sadesnadulathmii@gmail.com | +94 760837602 | [LinkedIn](#) | [GitHub](#) | Colombo, Sri Lanka

PROFESSIONAL SUMMARY

Second-year BSc Computer Science student at the University of Westminster (IIT, Sri Lanka), with solid hands-on experience in full-stack and backend development. I have built and deployed three real-world projects using Java, Python, JavaScript, React, and Next.js, including an AI-powered resume platform and an assistive technology product for real-time navigation. I enjoy working across the full stack, from designing REST APIs to building frontend interfaces, and I am looking for an internship where I can contribute to a real development team and grow as an engineer.

CORE SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks & Libraries: Next.js 14, React, Node.js, Flask, JAX-RS (Jersey), Tailwind CSS

Databases & Cloud: PostgreSQL, Supabase, Firebase Firestore, MySQL

Tools & Platforms: Docker, CI/CD, Git/GitHub, Maven, Postman, Figma, IntelliJ IDEA, VS Code

PROJECTS

Tailor AI - AI Resume Matching Platform (Individual Project)

[GitHub Link](#) - 2026

Technologies: Next.js 14, React, TypeScript, Supabase, PostgreSQL, Gemini 2.5 Flash, Tailwind CSS

- Built a full-stack AI-powered platform that analyzes resumes against job descriptions using the Gemini 2.5 Flash API, delivering real-time match scoring and actionable feedback.
- Architected a secure backend with Supabase and PostgreSQL, implementing Row Level Security (RLS) policies for private user data management.
- Developed a real-time PDF extraction engine and an interactive analytics dashboard with Tailwind CSS for data visualization.

Drishti - AI-Powered Smart Glasses & Mobile App (Group Project)

[GitHub Link](#) - 2026

Technologies: Flask, Firebase Firestore, Docker, CI/CD, Figma, REST API, Cloud Deployment

- Developed a Flask REST API backend to process real-time SOS alerts and validate GPS data, with Firebase Firestore for secure emergency data logging.
- Led mobile app UI/UX prototyping in Figma and architected Docker-based containerization for AI model deployment and backend services.

Smart Campus Sensor & Room Management API (Individual Project)

[GitHub Link](#) - 2026

Technologies: Java, JAX-RS (Jersey), Grizzly HTTP Server, Maven, REST API

- Built a fully functional RESTful API with full CRUD operations, sub-resource architecture for sensor readings, and custom exception handling (HTTP 409, 422, 403, 500).
- Implemented request/response logging using JAX-RS filters and used ConcurrentHashMap for thread-safe in-memory data storage following REST best practices.

EDUCATION

BSc (Hons) Computer Science

Sep 2024 - Present

University of Westminster (UK) - IIT, Sri Lanka | **2nd Year**

- Building and deploying full-stack and backend systems applying software engineering principles; designing RESTful APIs and OOP architectures with a focus on production-ready code.
- Collaborating in agile team environments to deliver software solutions that address real-world problems under time pressure.

Foundation in Computing

Sep 2023 - Sep 2024

Informatics Institute of Technology (IIT) - Colombo | **Merit Award - Top of Cohort**

- Gained foundational expertise in programming, web development, and UI/UX design applied directly in degree-level projects.

ACHIEVEMENTS & CERTIFICATIONS

IEEE Global Hackathon - Competed against international teams building real-time tech solutions

IEEEExtreme 19.0 - Solved competitive programming challenges in a 24-hour global coding contest

Vertex 2025 & Codesprint 2025 - Participated in national-level competitive programming competitions
